Calendar legends^[1]

Bangladesh:
seasons, rice crops
and Bengali months

The pre-monsoon season (March to May) has the highest temperatures and evapo-transpiration rates. Occasional squalls (norwesters) give heavy rain showers with strong wind (and occasional hail and tornadoes). Tropical cyclones affect coastal areas in some years.

The monsoon season (June to September) has the highest rainfall, humidity and cloudiness. More than 80% of the annual rainfall usually occurs in this season. Totals vary greatly from year to year, and the start and end dates of the season can vary by a month or more between years.

The post-monsoon season (October to November) is hot and humid with occasional rainfall and increasing amounts of sunshine. Tropical cyclones can affect the coastal areas.

Direction of time is clockwise

The dry season (December to February) is relatively cool and sunny with little and unreliable rainfall.

Calendar

Understanding the diagram

Here we have broken down the diagram with key legends to understand the diagram.

Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
