BANNER DATA

--[[  
-- Banner data consists of six fields:  
-- \* text - the main protection text that appears at the top of protection  
-- banners.  
-- \* explanation - the text that appears below the main protection text, used  
-- to explain the details of the protection.  
-- \* tooltip - the tooltip text you see when you move the mouse over a small  
-- padlock icon.  
-- \* link - the page that the small padlock icon links to.  
-- \* alt - the alt text for the small padlock icon. This is also used as  
tooltip  
-- text for the large protection banners.  
-- \* image - the padlock image used in both protection banners and small  
padlock  
-- icons.

--  
-- The module checks in three separate tables to find a value for each field.  
-- First it checks the banners table, which has values specific to the reason  
-- for the page being protected. Then the module checks the defaultBanners  
-- table, which has values specific to each protection level. Finally, the  
-- module checks the masterBanner table, which holds data for protection  
-- templates to use if no data has been found in the previous two tables.

--  
-- The values in the banner data can take parameters. These are specified  
-- using `#{TEXTLIKETHIS}` (a dollar sign preceding a parameter name  
-- enclosed in curly braces).

Available parameters:

--  
-- `#{CURRENTVERSION}` - a link to the page history or the move log, with the  
-- display message "current-version-edit-display" or  
-- "current-version-move-display".

--  
-- `#{EDITREQUEST}` - a link to create an edit request for the current page.

--  
-- `#{EXPLANATIONBLURB}` - an explanation blurb, e.g. "Please discuss any  
changes

-- on the talk page; you may submit a request to ask an administrator to make  
-- an edit if it is minor or supported by consensus."

```
--
-- {IMAGELINK} - a link to set the image to, depending on the protection
-- action and protection level.
--
-- {INTROBLURB} - the PROTECTIONBLURB parameter, plus the expiry if an
expiry
-- is set. E.g. "Editing of this page by new or unregistered users is
currently
-- disabled until dd Month YYYY."
--
-- {INTROFRAGMENT} - the same as {INTROBLURB}, but without final
punctuation
-- so that it can be used in run-on sentences.
--
-- {PAGETYPE} - the type of the page, e.g. "article" or "template".
-- Defined in the cfg.pagetypes table.
--
-- {PROTECTIONBLURB} - a blurb explaining the protection level of the page,
e.g.
-- "Editing of this page by new or unregistered users is currently disabled"
--
-- {PROTECTIONDATE} - the protection date, if it has been supplied to the
-- template.
--
-- {PROTECTIONLEVEL} - the protection level, e.g. "fully protected" or
-- "semi-protected".
--
-- {PROTECTIONLOG} - a link to the protection log or the pending changes
log,
-- depending on the protection action.
--
-- {TALKPAGE} - a link to the talk page. If a section is specified, links
-- straight to that talk page section.
--
-- {TOOLTIPBLURB} - uses the PAGETYPE, PROTECTIONTYPE and EXPIRY parameters
to
-- create a blurb like "This template is semi-protected", or "This article is
-- move-protected until DD Month YYYY".
--
-- {VANDAL} - links for the specified username (or the root page name)
-- using Module:Vandal-m.
```

## Functions

```
--
-- For advanced users, it is possible to use Lua functions instead of strings
-- in the banner config tables. Using functions gives flexibility that is not
-- possible just by using parameters. Functions take two arguments, the
-- protection object and the template arguments, and they must output a
string.
--
-- For example:
```

```

--
-- text = function (protectionObj, args)
--     if protectionObj.level == 'autoconfirmed' then
--         return 'foo'
--     else
--         return 'bar'
--     end
-- end
--
-- Some protection object properties and methods that may be useful:
-- protectionObj.action - the protection action
-- protectionObj.level - the protection level
-- protectionObj.reason - the protection reason
-- protectionObj.expiry - the expiry. Nil if unset, the string "indef" if set
--     to indefinite, and the protection time in unix time if temporary.
-- protectionObj.protectionDate - the protection date in unix time, or nil if
--     unspecified.
-- protectionObj.bannerConfig - the banner config found by the module. Beware
--     of editing the config field used by the function, as it could create
an
--     infinite loop.
-- protectionObj:isProtected - returns a boolean showing whether the page is
--     protected.
-- protectionObj:isTemporary - returns a boolean showing whether the expiry
is
--     temporary.
-- protectionObj:isIncorrect - returns a boolean showing whether the
protection
--     template is incorrect.
--]]

-- The master banner data, used if no values have been found in banners or
-- defaultBanners.
masterBanner = {
    text = '${INTROBLURB}',
    explanation = '${EXPLANATIONBLURB}',
    tooltip = '${TOOLTIPBLURB}',
    link = '${IMAGELINK}',

### GENERAL DATA TABLES

```

-----
---
-- Protection blurbs
-----
---

```

```

-- This table produces the protection blurbs available with the
-- ${PROTECTIONBLURB} parameter. It is sorted by protection action and
-- protection level, and is checked by the module in the following order:
-- 1. page's protection action, page's protection level
-- 2. page's protection action, default protection level
-- 3. "edit" protection action, default protection level
--
-- It is possible to use banner parameters inside this table.
-- *required* - this table needs edit, move, autoreview and upload subtables.
protectionBlurbs = {
    edit = {
        default = 'This ${PAGETYPE} is currently [[Help:Protection|'
        .. 'protected]] from editing',
        autoconfirmed = 'Editing of this ${PAGETYPE} by
[[Wikipedia:User access'
        .. ' levels#New users|new]] or [[Wikipedia:User
access levels#Unregistered'
        .. ' users|unregistered]] users is currently
[[Help:Protection|disabled]]',

```

```

        extendedconfirmed = 'This ${PAGETYPE} is currently under
extended confirmed protection',
    },
    move = {
        default = 'This ${PAGETYPE} is currently
[[Help:Protection|protected]]'
        .. ' from [[Help:Moving a page|page moves]]'
    },
    autoreview = {
        default = 'All edits made to this ${PAGETYPE} by'
        .. ' [[Wikipedia:User access levels#New users|new]]
or'
        .. ' [[Wikipedia:User access levels#Unregistered
users|unregistered]]'
        .. ' users are currently'
        .. ' [[Wikipedia:Pending changes|subject to review]]'
    },
    upload = {
        default = 'Uploading new versions of this ${PAGETYPE} is
currently disabled'
    }
},

```

```

-----
---
-- Explanation blurbs
-----
---
```

```

-- This table produces the explanation blurbs available with the
-- ${EXPLANATIONBLURB} parameter. It is sorted by protection action,
-- protection level, and whether the page is a talk page or not. If the page
is
-- a talk page it will have a talk key of "talk"; otherwise it will have a
talk
-- key of "subject". The table is checked in the following order:
-- 1. page's protection action, page's protection level, page's talk key
-- 2. page's protection action, page's protection level, default talk key
-- 3. page's protection action, default protection level, page's talk key
-- 4. page's protection action, default protection level, default talk key
--
-- It is possible to use banner parameters inside this table.
-- *required* - this table needs edit, move, autoreview and upload subtables.
```

```

-- Padlock indicator names

```

-----
---
-- This table provides the "name" attribute for the <indicator> extension tag
-- with which small padlock icons are generated. All indicator tags on a page
-- are displayed in alphabetical order based on this attribute, and with
-- indicator tags with duplicate names, the last tag on the page wins.
-- The attribute is chosen based on the protection action; table keys must be
a
-- protection action name or the string "default".
padlockIndicatorNames = {
    autoreview = 'pp-autoreview',
    default = 'pp-default'
},
-----
---
-- Protection categories
-----
---
--[[
-- The protection categories are stored in the protectionCategories table.
-- Keys to this table are made up of the following strings:
--
-- 1. the expiry date
-- 2. the namespace
-- 3. the protection reason (e.g. "dispute" or "vandalism")
-- 4. the protection level (e.g. "sysop" or "autoconfirmed")
-- 5. the action (e.g. "edit" or "move")
--
-- When the module looks up a category in the table, first it will will check
to
-- see a key exists that corresponds to all five parameters. For example, a
-- user page semi-protected from vandalism for two weeks would have the key
-- "temp-user-vandalism-autoconfirmed-edit". If no match is found, the module
-- changes the first part of the key to "all" and checks the table again. It
-- keeps checking increasingly generic key combinations until it finds the
-- field, or until it reaches the key "all-all-all-all-all".
--
-- The module uses a binary matrix to determine the order in which to search.
-- This is best demonstrated by a table. In this table, the "0" values
-- represent "all", and the "1" values represent the original data (e.g.
-- "indef" or "file" or "vandalism").
--
--      expiry    namespace reason    level    action
-- order
-- 1      1        1          1        1        1
-- 2      0        1          1        1        1
-- 3      1        0          1        1        1
-- 4      0        0          1        1        1

```

## Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
