```
--[]

-----
--          TableTools
--

--

-- This module includes a number of functions for dealing with Lua tables.
--
-- It is a meta-module, meant to be called from other Lua modules, and should
--
-- not be called directly from #invoke.
--

-----
--]]

local libraryUtil = require('libraryUtil')

local p = {}

-- Define often-used variables and functions.
local floor = math.floor
local infinity = math.huge
local checkType = libraryUtil.checkType
local checkTypeMulti = libraryUtil.checkTypeMulti

--[]

-----
-- isPositiveInteger
--
-- This function returns true if the given value is a positive integer, and
false
-- if not. Although it doesn't operate on tables, it is included here as it
is
-- useful for determining whether a given table key is in the array part or
the
-- hash part of a table.

-----
--]]
function p.isPositiveInteger(v)
    return type(v) == 'number' and v >= 1 and floor(v) == v and v <
infinity
end

--[]

-----
-- isNaN
```

```

-- This function returns true if the given number is a NaN value, and false
-- if not. Although it doesn't operate on tables, it is included here as it
is
-- useful for determining whether a value can be a valid table key. Lua will
-- generate an error if a NaN is used as a table key.
-----
-----

--]]

Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in

the coastal zone.
